Below are the results from the first round of testing of drinking water for lead that was conducted at Enid Public Schools - Eisenhower Elementary School on October 11, 2024. Overall, ten (10) outlets were tested resulting in a total of twenty (20) samples being sent to the lab.

- Nine (9) samples had no detectable level of lead.
- Eleven (11) samples had a low detection of lead between 1.0 and 14.9 µg/L.
- Zero (0) samples had a high detection of lead equal to or above 15.0 µg/L.

The table below shows all sample results. Sample results are in micrograms per liter, shown as µg/L. For more information on how to read this report, please see our **Results Interpretation Fact Sheet**.
